University of Nigeria, Nsukka, Enugu
06/2023

Frontend Development (React)

SideHustle Internship, Enugu
05/2022

Projects

1. **WorldieChat** (<https://worldiechat.web.app>) - This is a chat application with which users from all over the world can send and receive messages. The application includes user authentication and color themes switching. It was built using:

- ReactJS
- Styled Components: For styling and to implement color themes switching.
- Firebase: Used as a backend service and to implement authentication.

2. **Movio Website** (<https://movio-v2.netlify.app>) - This is an application for searching and viewing information about movies and TV Shows. Movies can be added to bookmarks which are saved on the user's computer. It was built using:

- ReactJS
- Redux
- Styled Components
- TMDB API

3. **Shortly URL Shortener** (<https://ikennaezef.github.io/url-shortener/>) - This is a custom URL Shortener application that can be used to shorten long and messy URLs. It does this through interaction with the shortcode API. It was built with ReactJS.
